

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

California Report for the Week Ended October 13, 1917.

The California State Board of Health reported concerning the status of preventable diseases in California for the week ended October 13, 1917, as follows: Anthrax in animals continued prevalent. Five cases of cerebrospinal meningitis were notified in the State, one in Solano County, three in San Diego County, and one in the city of San Francisco. Of poliomyelitis, one case each occurred in Berkeley, Marysville, and Oakland. Two cases of smallpox were notified in Fresno County, and one case of leprosy in San Francisco city. Typhoid fever diminished during the week with 25 cases scattered throughout the State. There was a minor outbreak of scarlet fever in Monterey County.

ANTHRAX.

Massachusetts.

During the month of September, 1917, 6 cases of anthrax were notified in Massachusetts. The source or suspected source of infection in all cases was the handling of imported hides. Five of the patients had handled hides imported from China and one had handled hides imported from Argentina.

¹ The reason that Birmingham had so many cases of malaria reported is not that the disease is more prevalent in Birmingham than in other cities of Alabama and neighboring States, but undoubtedly because of the successful efforts the health department has made in securing the cooperation of the practicing physicians in reporting cases.
